Dear Authors

This research is written according to a scientific rule that is significant; the results presented are relevant to the current conditions stated regarding the impact of smoking on the health of the population, including people of all ages.

Significantly, this manuscript underscores that smoking causes various health problems.

However, another issue that needs to be monitored is the role of the government, health authorities, and related institutions, including the community, in alleviating and minimizing the number of smoking individuals in Kenya in 2012–2021. Evidence-based insights specific to the evaluation of smoke suppression need to be addressed in the discussion, including recommendations.

Decision: Accepted, with minor revisions.
