Review of: "Tweeting AI: A Machine Learning Approach for Bird Species Detection and Classification"

Jesús Tomás[1]

1 Universidad Politécnica de Valencia

The present article has significant deficiencies that need to be corrected before publication:

1 The writing can be improved.

2 The abstract does not indicate results or contributions.

3 III. Literature Review, does not include any reference.

4 IV. Methodology does not address this topic, it is a description of Convolutional Neural Network already described in the introduction.

5 The dataset has not been adequately described.

6 No correctly conducted experimental section is included. In fact, there are no tables or graphs. The evaluation metric is not indicated.

7 Three references are clearly insufficient.
