Potential competing interests: No potential competing interests to declare.

The article presents an average level of research in its field. While it covers important topics and provides some valuable insights.

The article's methodology section would benefit from further elaboration and detail. While it outlines the research approach, additional clarity on the specific methods, data collection processes, and analysis techniques used would enhance the overall comprehensibility of the study. A more extensive description of the methodology would not only aid in replicating the research but also strengthen the article's credibility and impact.

The statistical analysis (3. Results and Comparative Analysis) employed in the article's results section appears to require improvement. A more rigorous and comprehensive approach to data analysis would enhance the article's scientific rigor and credibility, using graphics and indicators, and not just tables. By addressing potential limitations and providing a clearer interpretation of the statistical findings, the article could significantly strengthen its overall impact and contribute more effectively to the scientific community.

The section featuring photographs in the article requires improvement and should be organized in a logical sequence. By enhancing the clarity of image captions, ensuring proper labeling, and arranging the photographs in a coherent order that aligns with the narrative flow, the article can offer a more visually engaging and informative experience for readers. This improvement will help readers better understand and appreciate the visual elements within the research.

Numbering each table in the article is a crucial organizational step that enhances readability and navigation. This practice ensures that readers can easily refer to specific tables when discussing or analyzing the research findings. By implementing numbered tables, the article's structure and presentation will become more user-friendly and conducive to effective communication of the data.

Converting the last table, which contains the critical review for each university, into text format is an excellent idea to improve readability and comprehension. By presenting this information in a narrative form, readers can more easily understand and appreciate the nuanced evaluations of each university. This change will enhance the article's overall clarity and make the critical reviews more accessible to a wider audience.

Figure 30 should undergo improvements in a graphics editing software like Photoshop to better showcase the sketches and photographs. Enhance the contrast and sharpness of the images, adjust the brightness if necessary, and ensure that the labels and annotations are clear and legible. Additionally, consider arranging the sketches and photographs in a visually pleasing and informative layout to effectively convey the intended information to readers.

The discussion section would benefit from a more conclusive ending, incorporating hints about potential future research directions. By summarizing the key findings and their implications in a concise manner, and then segueing into areas where further investigation is warranted, the article can leave readers with a sense of closure while also inspiring curiosity about the potential for future developments in the field. This approach will make the discussion section more impactful and forward-looking.

Moreover, expanding the references section would add depth and credibility to the article. Ensure that all relevant and significant sources are included, not only to support the current research but also to provide readers with a comprehensive list of related literature. A robust references section not only strengthens the article's academic standing but also serves as a valuable resource for readers interested in further exploration of the topic.

Lastly, the article would greatly benefit from a thorough spelling and grammar review. Correcting any errors in spelling and grammar is essential to ensure clarity and professionalism in the presentation of the research. This step will make the article more accessible to readers and enhance its overall quality and credibility.
