Source

National Cancer Institute. *Mixed Phenotype Acute Leukemia with t(9;22)(q34.1;q11.2); BCR-ABL1*. NCI Thesaurus. Code C82192.

A rare mixed phenotype acute leukemia in which the blasts also carry the translocation t(9;22)(q34.1;q11.2) by karyotypic analysis or the BCR-ABL1 translocation by FISH or PCR. The prognosis is usually unfavorable.
