**Potential competing interests:** No potential competing interests to declare.

This review summarizes the concept and types of vitreous opacity, and compares different treatment effects. The following are some questions about this article.

1. In the part of 'varieties of floaters', the order of the paragraphs is somewhat confusion, author should rearrange the paragraph to make this part more clearly and organized. For example, it is better that the third paragraph should be move after the first sentence in the first paragraph
2. This article is aimed at the treatment of vitreous opacities, the part of 'Surgical Management of Diabetic Retinopathy' shouldn't appear. Vitreous hemorrhage can cause vitreous opacity, but it is not only diabetes retinopathy that causes vitreous hemorrhage. If author want to retain this part, I suggest you modify the subheading and appropriately expand the content in this section.
3. For different treatment, it is better to be attached the schematic diagrams and the comparative figures before and after treatment.
