Potential competing interests: No potential competing interests to declare.

Overall, nicely written. Few suggestions as follows:

- Characteristic diagram of the ulcer will be helpful.
- Socioeconomic factors, including understanding of the disease in the local population, should be discussed.
- Discussion on mode of transmission and treatment.
- What are the diagnostic criteria to diagnose or rule out the condition?
- What is the hypothesis for the higher prevalence in this population? Any reference/source will be helpful.

Thank you. Well done on the rest.
