## Recommendations towards a research article called "Sustainable Agriculture and Climate Resilience in Türkiye: A Comprehensive Analysis"

This article draws me in terms of the objective and scope seem to be clear and eventually to the point. However, there are significant flaws required to be edited as follows.

### Abstract

This part is too long. The author should make it concise and precise based on abstracts' good writing.

### Introduction part

1. In the Introduction part, the background seems incorrect because sustainable farming not only focuses on environmental aspects but also financial and social dimensions.
2. The author does not provide how climate change and small change in energy prices affect Turkey in terms of empirical evidence, showing that quantitative and qualitative data.

### Agricultural Targets of Türkiye's National Climate Change Adaptation Strategy and Action Plan 2011-2023

Overall, apart from providing detail about the nation's climate change adaptation strategy, it lacks significant analysis. So, it has been difficult readers to catch the manuscript's key details. New revision is recommended.
