This paper is about product development using the Eproccos platform. The topic is interesting, and some suggestions for improvement can be made, for example: first, in the background, there is not enough information regarding why this research needs to be done. The author has not described the main problems in detail so that they can be solved with Eproccos. Next, why, with Eproccos, are there any other platforms? Second, the author has included tables and pictures, but there is no detailed explanation of the images and how the product development mechanism works using Eproccos. Third, it is better if, in the first two sections, the author provides an overview of the methodology used in discussing the paper so that the reader understands the flow of discussion of the problem, objectives, procedures, and results. Fourth, don't use jargon without explanation. Lastly, why does the table numbering go directly to 1.3?
