The paper is interesting. The following suggestions can be incorporated in the manuscript.

- The details of the DEM used for the analysis may be included in the manuscript
- The details of calibration and validation of the HEC-HMS model may be included
- Performance measures for the HEC-HMS model are to be provided
- The dependent factors used in the CAM Model are to be specified
- Transition probability matrix is to be specified in the manuscript
- The details of the data used for training and validation of the CAM model may be included
