# Chromatid

National Cancer Institute

## Source

National Cancer Institute. *Chromatid*. NCI Thesaurus. Code C13200.

One of the two side by side replicas produced by chromosome replication in mitosis or meiosis. Subunit of a chromosome after replication and prior to anaphase of meiosis II or mitosis. At anaphase of meiosis II or mitosis when the centromeres divide and the sister chromatids separate each chromatid becomes a chromosome. (Biology-Text.com)
