Potential competing interests: No potential competing interests to declare.

The manuscript is a well-planned study, and the authors have collected important datasets about therapeutic agents for bacteria. The introduction is qualified with a literature review. The results are explained in detail with the support of the tables. The materials and methods section provides sufficient detail to allow for the replication of the analyses. However, some parts of the results should be improved.

It should be noted that the units in Table 1 are all expressed as equal values. Therefore, either the values in 100 grams should be provided, or the values of all units should be expressed in grams.

The manner in which Table 2 is presented is somewhat perplexing and should be reformatted to provide a more coherent and regular display.
