# Inhibitor of Nuclear Factor Kappa-B Kinase Subunit Alpha

National Cancer Institute

## Source

National Cancer Institute. *Inhibitor of Nuclear Factor Kappa-B Kinase Subunit Alpha*. NCI Thesaurus. Code C42328.

Inhibitor of nuclear factor kappa-B kinase subunit alpha (745 aa, ~85 kDa) is encoded by the human CHUK gene. This protein is involved in the positive regulation of nuclear factor kappa-B signaling.
