

Review of: "Electron Tunneling in Ferritin and Its Potential Influence on Myelin and Cardiomyocytes"

Priyadarshi Roy Chowdhury

Potential competing interests: No potential competing interests to declare.

I have gone through the preprint. My suggestions to the author are listed herein-

1. The abstract needs to be well organised. It should be able to present to the audience why this article is necessary and what the objectives of the article are.
2. The introduction section should be elaborative on the contents discussed in the manuscript.
3. Important findings on electron tunneling discussed in this work should be enlisted in a table.
4. The significance of electron tunneling in the present context should be discussed as a separate heading.
5. A clear-cut summary of the entire manuscript should be incorporated in the conclusions.
