

Review of: "Larache's Coastal in Morocco: Evaluating Dredging's Impact on Fisheries and Shorelineevolution"

M. A. Abu El-Regal

Potential competing interests: No potential competing interests to declare.

1. This work is descriptive work similar to reports rather than scientific research.
2. The work methodology is unclear and not mentioned in the abstract.
3. The abstract lacks many basic data, such as the method of work, the method of collecting and analyzing data, as well as the most important findings.
4. This type of work requires a model that explains the changes during previous years and the expected changes during the coming period if the influences continue.
5. There are no statistical tests or explicit data during the years of study.
6. Fauna and flora are not specific to the authors, so references must be specified.
7. There are many linguistic modifications that must be taken into account.
8. More information must be given about the study site, Larache coast, in terms of location, coordinates, area, and environmental and tourist significance.
9. There are no statistical studies on changes in fish production, and it is not clear that there is statistical significance because no statistical tests have been conducted, so it is not enough to compare numbers.
