

Review of: "Risk-Return Analysis of Select Crypto Currencies: During 2018-2022"

Juan Emmanuel Delva Benavides

Potential competing interests: No potential competing interests to declare.

This paper requires substantial improvements to become a scientific article.

1. The objectives are broad and cover a lot of ground. The author needs to narrow the focus and make the objectives more specific and attainable. The paper's objectives are stated in a general manner, but there is no specific research question that the author is trying to answer.
2. The author does not state the theoretical basis for the study or provide a clear conceptual framework to guide the analysis. Also, the author mentions some references, but does not provide a comprehensive review of the existing literature on the topic.
3. The statement "At present, everyone is crazy about 'Crypto-Asset' or 'Crypto-currency'" seems to be an overgeneralization and lacks empirical evidence to support it.
4. There are some inconsistency in terminology, like in the abstract the author uses the terms "crypto-asset" and "crypto-currency" interchangeably, which might create confusion for the reader. It would be clearer if the author consistently uses a single term throughout the paper.
5. The conclusion does not summarize the main findings and insights from the study.
