

Review of: "Higher Sales of Electronic Nicotine Delivery Systems (ENDS) in the US Are Associated with Cigarette Sales Declines, according to a Trend Break Analysis"

Tongyao Fan

Potential competing interests: No potential competing interests to declare.

1. The data source they used for analysis did not include online sales or specialty vape/tobacco stores, which could not provide the whole picture of cigarette and e-cigarette sales.
2. The study analysis only included quarterly GDP per capita and the monthly US unemployment rate as covariate, but did not consider other confounders (e.g., FDA regulation) that could impact cigarette or e-cigarette sales.
