Anorectal Malformations with Visible Fistulas. Theoretical Substantiation of a New Version of the Cutback Procedure.

1. Title:

- Number of appropriate words and is related to the objectives of the text and the development of the text. Specify that this is a literature review study.

2. Abstract:

- The main objectives of the study are described.
- Is necessary including the methodology, the metasearch engines that were used.
- The abstract exceeds 250 words.
- The most important results were summarized with their interpretation, pero no son claros.

3. Introduction:

- Relevant background is provided to understand the purpose and importance of the study.
- Discuss the epidemiology of anorectal malformations.
- The definitions used are adequate.
- Objectives are expressed appropriately.
- Specify the type of study.

4. Methods:

- Describe the metasearch engines used, keywords they used in the search.
- The figures relate to the description and are adequately explained.

5. Results.

- The results are adequately explained.
- Images in the text relate to the citation number.

-

6. Discussions.

- It is necessary to specify the discussion section.

7. Conclusion.

- The conclusion coincides with the development of the text.

8. References:

- Add more uptodate references.

Comments:

Excellent study, with great impact on medicine. The objectives proposed at the beginning of the study were met, however, it is necessary to specify the type of study and add a methodology that explains how the information search was carried out and the keywords used. The possible complications of this type of approach should be discussed (add informed consent) and the English language should be improved. Thank you very much for the invitation.

I recommend this article for publication with minimal corrections.
