Dear author

I like the way this paper is written and the flow of ideas especially in the discussion. However, there is no further description of what type of statistical analysis you used in this paper. Regarding your data, you have a lot of data with no response, in my opinion, you should remove these data from your database. Figure 1 is very difficult to understand, please better explain what it is in the legend. There are some parts of the result repeated in the discussion, such as paragraphs 1, 2, and others as well. No mention of figures in main text.
