The paper meets the criteria of an article, however, I recommend the following improvements:

1. In the introduction, the term homework is used. Homework is typically completed at home. Please adjust this term accordingly.
2. Why were different discussion times allocated for each topic? From a research perspective, having unequal conditions for comparing results is not ideal.
3. Why did only 4 students participate in the discussion? Were these students the most interested in the topics? Why weren't all students involved? How many students were there in total?
4. I would include a description of the research sample and the specific research methods employed, along with their purposes.
5. Merely relying on discussion questions is insufficient to gauge attention; relevant methods should be utilized.
6. Were other students surveyed regarding their satisfaction with the discussion, its progression, and the outcomes? If so, how was this done?
