Autosomal recessive distal renal tubular acidosis

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Autosomal recessive distal renal tubular acidosis. ORPHA:402041*

Autosomal recessive distal renal tubular acidosis (AR dRTA) is an inherited form of distal renal tubular acidosis (dRTA; see this term) characterized by hypokalemic hyperchloremic metabolic acidosis. Deafness often occurs either early or later on in life but may be absent or never be diagnosed.
