

Review of: "Circuits, Currents, Kirchhoff, and Maxwell"

Mohamed Abdelhady Nafe

Potential competing interests: No potential competing interests to declare.

In this study, the work seems to be an original well but improvement is suggested in the following.

1. Revise the abstract to provide (i) the significance of the study, (ii) the aim of the study, (iii) the research methodology, (iv) the major conclusions of the study.
2. In the last paragraph of the introduction, the novelty of this study and its differences with other published articles must be clearly explained.
3. Nomenclature with SI units should be added.
4. All equations must be cited.
5. Closing remarks need to be in more depth.
6. Include future works at the end of the conclusion.
