This was an excellent topic. The paper is generally well written and structured. However, in my opinion the paper has some shortcomings in regards to some data analyses and text, and I feel this unique dataset has not been utilized to its full extent.

Kindly check the following comments:

- Check grammar (need proofreading)
- Write the first letter from each word of abbreviation in capital letter. For example: (Health Care Workers HCWs).
- No need to write the full appreciation each time, just write it in the first time then write only the abbreviation e.g: HCWs
- The sample size not mentioned in the abstract
- The sampling technique in methodology part not included (sample size, calculation, inclusion and exclusion).
- Instrument: need to clarify the source of tool (reliability and validity).
- IRB: ethical approval not mentioned.

I think the paper need some work also in the introduction and discussion. Also, ypu need to add paragraph about limitation of study and recommendation.
