TITLE: IMPACT OF RISK FACTOR DIABETES MELLITUS ON PATIENTS WITH PERIODONTITIS

The manuscript provides comprehensive information on diabetes as a risk factor for periodontitis, highlighting the key points concisely, clearly and logically. I think that the current review will contribute to the literature.

The following few modifications may be made to the paper:

1. Some of the data in the manuscript may be updated as appropriate, and special attention should be paid to the research results of the last five years, such as the global prevalence of diabetes and periodontitis.
2. A more in-depth description of the role of DM in the pathogenesis of periodontal disease may be given.
