Potential competing interests: No potential competing interests to declare.

I reviewed the first version of this paper and asked the author to consider supplying a more worked out and detailed explanation of the thought experiment that underpins his argument. I find that the second version has not really advanced the author's argument any further. So, I would once again ask the author to provide a proper level of scientific detail to explain the experiment in a convincing manner. Anything less than this means that the paper just remains an exercise in conjecture.
