

# Review of: "Critical Research Thinking: A Recipe for Academic Writing Success and Publications"

Abhradip Banerjee

**Potential competing interests:** No potential competing interests to declare.

This article deals with the importance of critical research thinking that leads to success in academic writing. As a topic of research, this article certainly deals with one of the most important issues that researchers often encounter in social science research. While the author, through this article, has quite diligently pointed towards the goal of research thinking and particularly the ways through which researchers can develop critical research thinking, the explanations in this article look a bit too narrow and shallow in terms of the standards expected in a social science research article. This article provides a general perspective; it would have been better if the author could provide a story of his/her ways through which he has developed critical research thinking, more specifically, how his lack of academic exposure to any particular research topic, institutional, theoretical, and methodological influences played a role in it. This would have provided this article a more contextual interpretation.
