Potential competing interests: No potential competing interests to declare.

The rating given is for the quality of presentation and writing in general, that stands flawless, but as a mathematical modeller, I am ill at ease to accept comments on 'modelling' that has no mathematics or statistics in them. Perhaps this is the nature of remit but I feel that there is substantial possibility in engendering proper mathematical modelling using the descriptors that have been so clearly outlined by the author. I will encourage either a follow-up or a new study on data centric modelling based on the outline presented in this manuscript.
