Potential competing interests: No potential competing interests to declare.

In this manuscript, the efficacy of copper nanoparticles in treating viral skin infections was reviewed.

The use of English Language is excellent

The manuscript structure is fine

and the novelty is evident throughout the manuscript.

Some minor revisions I would suggest:

1. For each case studied, it would be useful to be mentioned, the problems and the issues that derive from each application and why some of these researches are not a product in themselves already.
2. Moreover a chapter upon the cost analysis of treatment fabrication should be useful and add to the manuscript's merit.
