Monoclonal Antibody D6.12

National Cancer Institute

Source

National Cancer Institute. *Monoclonal Antibody D6.12*. NCI Thesaurus. Code C2683.

A murine IgG2a monoclonal antibody directed against a 48 kDa antigen expressed on the cell surface of normal and malignant gastrointestinal epithelium. MoAb D6.12 has been shown to induce antibody-dependent cell-mediated cytotoxicity (ADCC). This MoAb, either alone or in combination with other immunotherapeutic agents, may have possible diagnostic or therapeutic applications in gastrointestinal cancers.
