

Peer Review

Review of: "Fabrication of Soft and Comfortable Pressure-Sensing Shoe Sole for Intuitive Monitoring of Human Quality Gaits"

Mohsen Shanbeh¹

1. Department of Textile Engineering, Isfahan University of Technology, Iran, Islamic Republic of

Although the topic of work is interesting and the literature review is well enough, there are some important points that must be considered:

- 1- The novelty of the work must be noted, and you should compare your idea with other proposed methods in this field.
- 2- There are some criteria to evaluate the performance of a sensor, such as sensitivity, linearity, etc.; all of them must be considered to evaluate the performance of the proposed sensors.
- 3- The abstract and conclusion of the manuscript must be modified, and some results must be presented in both of them.
- 4- The performance of the proposed sensors must be compared with those in previous studies.
