

Review of: "External validation of the T.O.HO. score as predictor of success after retrograde intrarenal surgery"

Ahmed EL-Nahas

Potential competing interests: The author(s) declared that no potential competing interests exist.

This retrospective study externally validated TOHO score for predicting success of RIRS.

Comments:

1. Measurement of stone size for multiple stones is not clear. Did the authors multiple or sum lengths of each stone?
2. Definition of success must be added
3. Methods of stone disintegration and retrieval were not mentioned in methods section.
4. Classification and management of complications were not mentioned in the results.
5. I suggest adding odds ratio to table 3 for the multivariate analysis.
6. Reference #4 is not complete
