About article:

1. The idea presented in the article is very good.

Suggestions:

1. All abbreviations should be defined in full the first time they appear in the title, abstract, main text, and figure or table captions, even if they are well known in the field. E.g., Radio Frequency Identification (RFID). Please correct all corresponding terms in your work.
2. It would be good to improve the quality of your pictures.
3. Improve your abstract and show results with values. Also, write what the limitations of this work are and how the work will be continued.
4. The abstract is lacking an introduction and conclusion part.
5. In Fig.5, parking space available is checked multiple times. The admin has the parking space available data, but again checking is not a good one.
6. The authors must compare it with some existing systems and utilize the latest algorithms for wireless sensor networks.
7. The conclusion section is written in a concise manner.
