# Vulvar Superficial Myofibroblastoma

National Cancer Institute

## Source

National Cancer Institute. *Vulvar Superficial Myofibroblastoma*. NCI Thesaurus. Code C128272.

An uncommon benign polypoid or nodular mesenchymal neoplasm that arises in the vulvovaginal region. It is characterized by the presence of oval or spindle-shaped cells in a collagenous stroma and is separated from the epidermis by a variably thick Grenz zone.
