Article: Prevalence of Buruli Ulcer Among Residents in Jasikan Municipality: A Cross-Sectional Study

Reviewer's Comments:

Dear Authors,

Please make the following corrections.

- **Methodology:** This section is required to be rewritten as most of the text is irrelevant. No references were provided for the information in the second paragraph of this section about demographic characteristics, dependency ratio, and total fertility rate. The last 2 paragraphs can be omitted.
- Please clearly mention whether you have conducted a population-based survey of the total population of Jasikan Municipality or not.
- **Sample Size:** Mention prevalence of Buruli ulcer cases, which statistical software was used for sample size calculation at 95% confidence interval and 80% power.
- **Comment:** Briefly describe the initial screening strategy such as any specific symptoms or signs or any specific test that was used for early detection of the case before referring them for a biopsy with references.
- For the reliability and validity of questionnaire used please mention Cronbach's alpha reliability coefficient.
- Kindly add and provide the latest references as most of them are more than 5 years old.

Regards,

Dr. Tahseen Kazmi
