Glasdegib

National Cancer Institute

Source

National Cancer Institute. *Glasdegib*. NCI Thesaurus. Code C84862.

An orally bioavailable small-molecule inhibitor of the Hedgehog (Hh) signaling pathway with potential antineoplastic activity. Glasdegib appears to inhibit Hh pathway signaling. The Hh signaling pathway plays an important role in cellular growth, differentiation and repair. Constitutive activation of Hh pathway signaling has been observed in various types of malignancies.
