**Potential competing interests:** No potential competing interests to declare.

The Article is well written and reflects a reasonable use of methodology. The topic is very important and probably can help develop guidelines for this population to have a safer work environment. I would suggest using the [Appraisal tool for Cross-Sectional Studies \(AXIS\)](#) for more clarity in methodology reporting. Also, it might be worthy to include recommendations that can be directed to individual workers to reduce the risk of impairments based on participants' experiences.
