Potential competing interests: No potential competing interests to declare.

The subject is interesting however, I am not so sure whether I understand the paper correctly, but I proposed 3 hypothesis for qualitative studies. Normally, in qualitative studies we proposed propositions. If it was hypothesis, why didn't you test your hypothesis in the analysis?

Can you please elaborate more on tool that you used in to do your analysis?

I did not see the demography of your respondents. How many they are? I only see they were 3 (three) respondents in the Table 1. Is it true? If yes, how could you propose your analysis result based on 3 participants.

Maybe I was wrong in reading your draft, but please enlighten me if I was.
