I think it's a nice study investigating the menstrual cycle pattern with Covid-19.

How long after the Covid-19 infection did menstrual changes occur in the cases included in the study?

When were the cases in the study evaluated after Covid-19 infection? How long had it been since infection?

Do the cases in the study have a history of Covid-19 vaccine?

The number of menstrual days in Table-2 should be >7 instead of <7.
