

# Review of: "Decoding the Correlation Coefficient: A Window into Association, Fit, and Prediction in Linear Bivariate Relationships"

Yuan Li

Potential competing interests: No potential competing interests to declare.

I don't feel like this paper proposes anything new regarding what we have already learned for now about correlation vs regression coefficient. Also it's better to present the results in a more formal and more mathematical way, which is more precise and clear about what the author is trying to derive and conclude. Another suggestion is that the author could consider showing some simple data examples for a better illustration.
