Small Lymphocytic Lymphoma with Immunoglobulin Heavy Chain Variable-Region Gene Somatic Hypermutation

National Cancer Institute

Source

National Cancer Institute. *Small Lymphocytic Lymphoma with Immunoglobulin Heavy Chain Variable-Region Gene Somatic Hypermutation*. NCI Thesaurus. Code C37203.

Small lymphocytic lymphoma characterized by the presence of somatic hypermutation within the immunoglobulin heavy chain gene variable region of neoplastic clones. Patients have a better prognosis as compared to those with unmutated immunoglobulin heavy chain gene variable region rearrangements.
