

Review of: "[Review] Optimizing Wastewater Treatment Performance System and Achieving Greater Efficiency to Improve Water Quality for Sustainability — A Review"

Alexis Rubén Bracamontes-Ruelas

Potential competing interests: No potential competing interests to declare.

I would first like to thank you for the invitation as a reviewer at Qeios.

Now, regarding the article, there are some potential observations that can increase the quality of the manuscript:

- 1) Put the objective of the Review in the introduction section.
- 2) Be more specific and selective in the information you want to present in the manuscript, since you talk about many generalities that the scientific world focused on wastewater treatment already knows.
- 3) It seems that figure 4 does not appear.
- 4) Improve the quality of the images, since some of them are not well appreciated.
- 5) Sometimes it is difficult to understand the manuscript, because it lacks a better arrangement in the subsections, as well as in the description of the methods of wastewater treatment (congruence and relationship).
