Dear Authors, thank you for your work. The paper has been significantly improved and is now, in my opinion, ready for publication. In particular, the fundamental aspects have been improved to enable a greater understanding of the research, with more attention to detail and descriptions. Reading and understanding are clearer, and the results have been listed with more details about cerebrovascular accidents. Furthermore, Table 1 helps to focus on the key points of the study and the effect of the physiopathology of COVID-19 (it is synthetic and not too many to confuse the reader).
