Women education in Ethiopia

Introduction

Need citation paragraph one line 9 before the word However?

Paragraph 2 line 3 also needs citation.

Please revise all paragraphs of the introduction part need citation.

Methods

Why you used EDHS 2016? Why not mini EDHS 2020? What is the difference b/n them?

Why you widened the data collection period <January 18, 2016, to June 27, 2016> it is simple cross-sectional survey study from secondary data does not need this amount period. Increasing period has the chance to make bias/fabricating data.

Your study Included <women aged 15-49> but in rural area in Ethiopia women may delay to start their education and may start after the age of 15 years old, so by this data can you concluded that those women are illiterate? I don't think so. Please reconsider this assumption.

Sampling design

Are you sure about the sampling procedure to select the study participant proportionality. The central statistics performed in Ethiopia particularly the sociodemographic character detected by CSA before not acceptable and believable by people of Ethiopia. so how can you get acceptance of this paper?

Variables in the study

What about women who have taken informal education the so called < Y Aregawiyen Timhrt>? Have included them as have no education?

Discussion

It seems a result like writing form.

Please rewrite as a comparative form of writing and also write the name of the country than only put the citation (hidden the country) you want to compare to be easily understandable by the reader.

Conclusion

Your conclusion is not be correct << The descriptive part of the data showed that most of the women were illiterate>> but most of the participants (55.38%) of them where educated. So please rewrite it is.

Recommendation?

Dear author you should have recommendation to concerned bodies responsible to this event.

Strength and limitation?

Also you have to have mainly limitation of this study?
