

Review of: "Translational Mobility Medicine and Ugo Carraro: A Life of Significant Scientific Contributions Reviewed in Celebration"

Giorgio Fanò Illic

Potential competing interests: No potential competing interests to declare.

First of all, I congratulate the authors of the text because it certainly could not have been easy to describe in such a clear though concise manner the work of a volcanic personality as Ugo Carraro certainly is.

However, one notation is missing in the "Current Scientific Contributions" section: prof. Carraro was a co-founder (20 years ago) of a great reality in the national and international scientific scenario for those involved in myology research, The Interuniversity Institute of Myology (IIM).

Since I was also involved in the creation of this well-established association of myologists, which is still active today, I hope and believe that the mention of this event and the role that Ugo Carraro played can be added to the list of his merits.
