Potential competing interests: No potential competing interests to declare.

The strength of this research article is that it focuses on a timely and relevant issue of rising demand for meat and milk in India, coupled with environmental concerns. The article well highlighted the potential and challenges and acknowledged the economic benefits of livestock production while recognizing the environmental drawbacks. Considering sustainability, it needs to emphasize the long-term solutions beyond just treating symptoms but the potential for innovation to improve efficiency. If possible, include data on the increasing demand for meat and milk, the environmental stress, and the economic contribution of livestock. Provide details on how mixed farming systems are changing and the impact on livestock production. Give some examples of potential technologies that could reduce resource consumption. While you mention considering demand when setting prices, propose additional solutions to address environmental concerns like deforestation and waste management. By incorporating these suggestions, your comments offer a more comprehensive and informative analysis of livestock development in India.
