Full Title: The Efficacy of Copper Nanoparticles in Treating Viral Skin Infections: A Systematic Review and Meta-Analysis.

Article Type: Review Research

Dear Sir,

The authors The Efficacy of Copper Nanoparticles in Treating Viral Skin Infections: A Systematic Review and Meta-Analysis. I, therefore, feel that this manuscript can be published after the **Minor Revision**, here is my comments.

Comments-

1. The abstract should be eye-catching, incorporate the novelty and finding of the work.
2. Why author choose only copper nanoparticle as therapeutic agent??? There are other nanoparticle such as zinc oxide, titanium oxide
3. Cited references in the introduction are not proper, authors are recommended to cite the specific work leading to topic.
4. Provide any mode of action or mechanism nanoparticle with skin related disease or how nanoparticle used in skin disease.
5. The authors should include the recent references in this manuscript which is very helpful to the researchers, and avoid the old references.
6. References in the manuscript not arranging properly, some reference with volume & issue but others are not, the reviewer suggests to refine them.
7. Revise conclusion, authors must emphasis on the output of the discussions. Also incorporate the recent citations in the revised manuscript.

An overall recommendation is the manuscript should be published with Minor Revision.
