Review of: "[Review] Redefining the Concept of e-Government Program. A Review of the Literature"

Samson Mutsagondo

The article makes interesting reading as the author explores new avenues to look at the concep of e-government. True, it is myopic to look at the concept from just the lenses of ICTs and service delivery. I highly recommend the work.

Nonetheless, the author should address the few typographicals that I indicated. As well, there is need to consult very recent sources on e-government. The author should realise that there is a lot of literature on e-government some of which might be in the process of being published as Iam writing. I propose sources from 2018 to date.

the framework proposed by the author is thought-provoking and awesome. However, since the author is running away from perceiving e-government in the lenses of ICTs, I suggest the 5 concepts should not link directly away from ICTs because this will still give ICTs anedge over other concepts. I suggest that e-government stand in the middle and the 6 concepts spring from it as they also relate among themselves.

Author needs to refine the illustration.

The article is publishable as it brings in interesting findings based on desk-research. However, authr needs to attend to the few comments that I raised.

Thank you.
