**Potential competing interests:** The author(s) declared that no potential competing interests exist.

The topic is of interest. However, language flow can be refined to bring clarity in the context. The following title (though lengthy) may justify the contents:

"An initiative and efforts by various stakeholders in India to monitor carbon dioxide in public assembly places for ventilation measurement in order to prevent airborne infections".

Further, if the PIL date/year and latest decisions can be added to the commentary, the article could be more beneficial to the readers. Overall, the article can be published.
