The research questions seem a bit too broad; it would be better to narrow the scope and formulate more specific RQs, such as research questions: What challenges hinder the implementation of AI in SMEs? What resources and skills are needed in SMEs to effectively adopt AI?

The literature needs to be explored and expanded. I suggest the following papers: Feliciano-Cestero, M. M., Ameen, N., Kotabe, M., Paul, J., & Signoret, M. (2023). Is digital transformation threatened? A systematic literature review of the factors influencing firms' digital transformation and

internationalization. *Journal of Business Research*, 157, 113546. And also Radicic, D., & Petković, S. (2023). Impact of digitalization on technological innovations in small and medium-sized enterprises (SMEs). *Technological Forecasting and Social Change*, 191, 122474.

Given the exploratory nature of the investigation, it would be more appropriate to also use a qualitative methodology that delves into the topic of specific needs and limitations for AI implementation in SMEs.
