Please review the article as it contains several grammar issues and lacks information in some parts of the body. The percentage subject is incorrect, and there is no reference for the formula used. In the statistical section, it is necessary to mention the software used. The equipment description for TEM/SEM/FTIR is missing. The method or protocol used for macroscopic examination is also missing, along with the reference. The tables need more information about the data shown. In the bibliography, some references have abbreviations while others do not. Therefore, the entire bibliography section needs to be standardized.
