The Comments are as follows:

1. It is better that the title does not overlap with the keywords. This keyword does not provide relevant information on the paper. I will suggest selecting a keyword related to the methodology.
2. The main purpose of this study is given in the introduction. But nothing has been said about the advantages of the present study over other previous studies.
3. Authors have also failed to articulate the major contribution of the study to the literature. The novelty and the contribution of the study to literature has not presented.
4. What are the practical suggestions resulting from this study?
5. The research method is incomplete and the method of doing the work is not well mentioned.
6. The present article deals with the statistical presentation of the completed questionnaire results and lacks a specific research method.

Best Regards
